PERSONAL PROJECTS

Student Record Management System

- Completed exciting MERN stack project focusing on student management. Developed a robust CRUD application allowing seamless insertion, display, search, edit, and deletion of student records.
- Technologies Used: **React.js**, **Node.js**, **Express.js**, **MongoDB**

Task Management System

- Developed a comprehensive Employee Task Management System using **MERN** technology. The application features robust authentication and authorization with admin control, allowing efficient task assignment, tracking, and management of employee activities. Implemented RESTful APIs for seamless data handling and a responsive user interface to enhance user experience.

Parlour Website

- Developed a responsive beauty parlour website using **React.js** and **Node.js**, integrating **MongoDB** for seamless data storage. Implemented email functionality for automatic confirmation emails and OTP verification for enhanced security and user engagement, fostering customer loyalty.

Drag & Drop

- Maked a drag-and-drop website using React.js and Node.js, enabling users to effortlessly upload images, which are stored in MongoDB along with their sizes.
- Implemented frontend functionality for displaying uploaded images, allowing users to download and delete images directly from the interface.

INTERNSHIP EXPERIENCE

Cybrom Technology Pvt. Ltd.

MERN Stack Developer

MensClothing Ecommerce website using MERN technology

Role/Tasks

- Led team collaboration by effectively assigning tasks to teammates based on individual strengths and project requirements.
- Demonstrated proficiency in version control by consistently uploading code to GitHub repositories.
- Spearheaded the management of Cloud Manager platforms
- Engaged in both frontend and backend development tasks, showcasing versatility and proficiency across the full software development lifecycle.
